DIY IC CARD LOCK OPERATION

1) Issue User Cards

Please insert the Managers Card into the lock first . The Green & Red Light will lit up, then you can insert blank cards one by one. After this step you can use these cards to unlock the lock .

2) Delete User Cards

If any User card is lost, please insert the Manager Card into the lock three times continuously. After inserting the Managing Card three times, the red light will be flashing continuously. Then the Green light will be on and you will hear a beep sound from the lock. The deleting process has been successful. Then all User cards cannot open the lock anymore. Please follow Step 1 to reissue the new user card for this lock.
